SUMMARY

An electrical engineering foundation and AI/ML minor led to language-model work, then production computer vision at Fotos. There, photography workflows achieved **>99% detection accuracy** and reduced manual editing effort by **60%**. Now pursuing a Master of Artificial Intelligence at Monash, with projects spanning RAG, agents, multimodal analysis, and model adaptation.

EDUCATION

Monash University 2026 - 2028 (Expected)
Master of Artificial Intelligence | Current WAM: 79.0 | GPA: 3.5

BVRIT (JNTUH) 2020 - 2024
B.Tech in Electrical and Electronic Engineering | CGPA: 8.05/10
Minor: Computer Science - Artificial Intelligence & Machine Learning | CGPA: 8.90/10

EXPERIENCE

AI Engineer Feb 2025 - Jan 2026
Fotos Remote

- For photography workflows that needed reliable facial analysis, deployed GCP vision microservices using TensorFlow, OpenCV, RetinaFace, and DeepFace/ArcFace; achieved **>99% accuracy** for facial, eye, and mouth topology detection.
- Extended photo culling beyond face detection by combining identity clustering, quality/expression scoring, and Qwen2.5-VL served with vLLM, enabling context-aware image assessment and ranking.
- Addressed manual editing effort with neural preset-based color style transfer, reducing professional editing time by **60%**; supported production serving through cloud deployment, inference APIs, and performance monitoring.

Artificial Intelligence Intern Jan 2024 - Feb 2024
Navodita InfoTech Remote

- Worked across two language tasks: conversational responses through a spaCy/NLTK chatbot with transformer generation, and French-English translation through an encoder-decoder model that achieved **BLEU 0.8**.

PROJECTS

Multi-Agent & Voice AI Assistants | *LangGraph, RAG, Google APIs, STT/TTS*

- Connected conversations to actions: a Telegram assistant routes email, calendar, news, and travel requests using intent detection, RAG, and Google APIs. A travel-sales voice assistant links speech recognition, an LLM, retrieval, and speech synthesis.

LLM Fine-Tuning & Domain Adaptation | *Qwen3, Hugging Face, PyTorch*

- Adapted models for different contexts: fine-tuned role-structured, multi-turn chat data for concise replies and tested unseen prompts; continued pretraining of Qwen3 on approximately 20 medical books to adapt terminology for a health-information assistant.

Generative Models from Scratch | *PyTorch, GANs, Diffusion, U-Net, CIFAR*

- Explored image generation from the training loop upward: implemented GAN architectures, adversarial loss, and alternating optimization, then a diffusion pipeline with timestep conditioning, U-Net noise prediction, and reverse denoising.

Multimodal Image Analysis & Computer Vision | *CLIP, YOLO, OpenCV, VLMs*

- Turned image-and-text analysis into structured JSON with quality scores, visual drawbacks, and explanations for downstream integration; explored semantic ranking with CLIP and object-level analysis with YOLO/OpenCV.

Predictive ML & Analytics | *XGBoost, Random Forest, Optuna, SQL, FastAPI, Power BI*

- Connected churn predictions to retention decisions through SQL/EDA, stratified cross-validation, APIs, dashboards, and A/B-testing design. A separate loan-approval classifier achieved **0.97070 public-leaderboard ROC-AUC** using Optuna and 5-fold cross-validation.

TECHNICAL SKILLS

Languages & data: Python, SQL, C++, MongoDB, Power BI.

ML & deep learning: scikit-learn, XGBoost, Random Forest, Optuna, PyTorch, TensorFlow, Hugging Face; classification, clustering, feature engineering, cross-validation, transformers, GANs, diffusion.

GenAI & vision: LLM fine-tuning, domain adaptation, RAG, agents, NLP, LangGraph, LangChain, CLIP, YOLO, OpenCV.

Engineering: FastAPI, vLLM, GCP, Docker, Git/GitHub, REST APIs, CUDA, MLOps, deployment and monitoring.

ACHIEVEMENTS & CERTIFICATION

ATVC Innovation Runner-Up (2023) | My Anatomy AI-thon Finalist (2023)
Advanced Data Science & AI Certification - Intellipaat (IIT-Madras)
