SUMMARY

Electrical engineering and an AI/ML minor took me from model experiments to production vision at Fotos, where I learned to connect models with everyday workflows. Now studying AI at Monash, I am extending that approach through role-based agent collaboration, multimodal analysis, and language-model adaptation.

EDUCATION

Monash University <i>Master of Artificial Intelligence</i>	2026 - Present Current WAM: 79.0 GPA: 3.5
BVRIT (JNTUH) <i>B.Tech in Electrical and Electronic Engineering</i> <i>Minor: Computer Science - Artificial Intelligence & Machine Learning</i>	2020 - 2024 CGPA: 8.05/10 CGPA: 8.90/10

EXPERIENCE

AI Engineer <i>Fotos</i>	Feb 2025 - Jan 2026 Remote
- Deployed GCP vision microservices for photography using TensorFlow, OpenCV, RetinaFace, and DeepFace/ArcFace; achieved >99% accuracy for facial, eye, and mouth topology detection. - Extended photo culling beyond face detection by combining identity clustering, quality/expression scoring, and Qwen2.5-VL served with vLLM, enabling context-aware image assessment and ranking. - Reduced manual editing time by 60% with neural preset style transfer; managed deployment, inference APIs, and monitoring.	
Artificial Intelligence Intern <i>Navodita InfoTech</i>	Jan 2024 - Feb 2024 Remote
Built conversational responses with a spaCy/NLTK chatbot and transformer generation, alongside an encoder-decoder French-English translator that achieved BLEU 0.8.	

SELECTED PROJECTS

AgentForge - In Development <i>Multi-Agent Systems</i> <i>Python, LangGraph, Groq</i>	
- Designing a workspace that turns a high-level objective into coordinated work across eight specialised roles: Manager, Planner, Researcher, Product, Marketing, Developer, Tester, and Reviewer. - Designed task dependencies, shared project state, structured agent results, and artifacts so specialists can receive role-relevant context and hand work between planning, research, development, and review. - Specified separate technical-testing and requirements-review stages, revision loops for failed work, and human approval before completion; planning an activity dashboard that exposes assignments, handoffs, and progress.	
Multimodal Image Analysis <i>Computer Vision</i> <i>Vision-Language Models, CLIP, YOLO, OpenCV</i>	
- Built an image-plus-text quality-assessment pipeline returning structured JSON with quality scores, identified visual drawbacks, and explanations, making model outputs easier to integrate with downstream applications. - Developed CLIP image-text similarity and ranking experiments alongside YOLO/OpenCV detection, exploring semantic matching, visual retrieval, and object-level image analysis.	
LLM Fine-Tuning & Domain Adaptation <i>NLP</i> <i>Qwen3, Hugging Face, PyTorch</i>	
- Prepared role-structured, multi-turn user/assistant examples, fine-tuned a conversational model for concise replies, and tested behaviour on unseen prompts. - Explored Qwen3 continued pretraining on a curated medical-book corpus to adapt domain terminology. Further medical experiments used 20+ books and research papers for masked-language-modeling adaptation. - Used labelled, LLM-generated conversations for supervised fine-tuning with a causal language-modeling objective, aiming to connect domain-focused training with more natural conversational responses.	

TECHNICAL SKILLS

Languages & data: Python, SQL, C++, MongoDB, Power BI.
ML & deep learning: PyTorch, TensorFlow, scikit-learn, Hugging Face, XGBoost, Optuna; CNNs, transformers, GANs, diffusion.
GenAI & vision: RAG, LangGraph, LangChain, fine-tuning, prompt tuning, byte-pair tokenization, CLIP, YOLO, OpenCV.
Engineering: FastAPI, vLLM, GCP, Docker, Git/GitHub, REST APIs, deployment and monitoring.

ACHIEVEMENTS & CERTIFICATION

ATVC Innovation Runner-Up (2023) | My Anatomy AI-thon Finalist (2023)
Advanced Data Science & AI Certification - Intellipaat (IIT-Madras)
